

John Ghlen Dealdo

DevOps / Infrastructure Engineer | Linux, Networking & Automation

johnglhendealdo@gmail.com | +63 909 939 5356 | github.com/Sureinity | LinkedIn | portfolio.ghlensui.xyz

PROFILE

DevOps and Platform Engineer specializing in Linux, networking, and infrastructure automation to build secure, repeatable, and easily recoverable systems. Experienced in architecting Proxmox-based environments, deploying containerized services with Docker, and developing Python/FastAPI automation tools. Leverages Terraform, Ansible, and WireGuard to ensure reliable infrastructure operations with a strong emphasis on validation, auditability, and rollback capabilities.

TECHNICAL SKILLS

Infrastructure & Platforms: Linux, Proxmox VE, OPNsense, WireGuard, Docker, Docker Compose, Coolify, Traefik

Infrastructure as Code & CI/CD: Terraform, Ansible, GitHub Actions, Make

Automation & Backend: Python, FastAPI, Bash, PostgreSQL, Budibase, REST APIs

Security & Operations: CrowdSec, OWASP ZAP, Nuclei, Nmap, Trivy, Semgrep, TLS, WAF validation

PROFESSIONAL EXPERIENCE

Linux SysAdmin / System Engineer | Helity

Dec 2025 - Present

- Designed Proxmox VE networking with OPNsense, implementing private VM bridges and DHCP/NAT boundaries to ensure secure, isolated environments.
- Built a Python/FastAPI provisioning worker integrating Budibase, PostgreSQL, Docker Compose, and the Proxmox API to automate queued VM clone requests.
- Deployed Coolify, Traefik, CrowdSec, internal TLS, and WAF validation for a secure self-hosted application platform, documenting procedures for repeatable administration.
- Automated system validation, rollback, and infrastructure data collection using custom scripts to ensure safer changes and operational reliability.

DevOps Intern | Infosoft

Mar 2026 - Jun 2026

- Improved development workflows and maintainable team operations by introducing infrastructure as code, configuration as code, and CI/CD automation.
- Optimized a Docker-based PHP/Laravel development environment template, reducing local setup complexity and overhead for the engineering team.
- Developed a Python DevSecOps CLI to automate repeatable web audits and scanner orchestration, generating structured security evidence.
- Standardized security-focused automation and documentation frameworks to ensure reliable, auditable container deployment practices.

Infrastructure Engineer | Gated Proxmox Management via OPNsense

Infrastructure Project

- Designed a hardened two-bridge Proxmox architecture featuring a public WAN bridge and an isolated private management bridge via an OPNsense firewall VM to secure operator access.
- Executed a critical network transition by sequencing baseline captures, rollback preparation, WireGuard validation, and management cutover.
- Hardened infrastructure security by reducing direct hypervisor exposure while maintaining clear recovery paths, certificate behavior, and VPN-first administrative access.

EDUCATION

University of Mindanao - Digos College

Aug 2023 - Jul 2026

Bachelor of Science in Information Technology. Focused on Linux, web development, cybersecurity, machine learning, infrastructure automation, and practical deployment workflows.
