

John Ghlen Dealdo

DevOps & Platform Engineer

johnglhendealdo@gmail.com | +63 909 939 5356 | Digos, Philippines
github.com/Sureinity | linkedin.com/in/jgdealdo | portfolio.ghlensui.xyz

PROFESSIONAL SUMMARY

DevOps and Platform Engineer specializing in Linux, networking, infrastructure as code (IaC), and secure delivery pipelines. Experienced in engineering zero-trust network boundaries with Cloudflare Tunnels, Tailscale, and OPNsense, orchestrating multi-environment cloud and self-hosted infrastructure with Terraform and Ansible, and building immutable containerized deployment workflows. Strong emphasis on reproducible baselines, validation gates, and documented rollback strategies.

TECHNICAL SKILLS

Infrastructure & Virtualization: Linux (Debian, Ubuntu), Proxmox VE, DigitalOcean, Docker, Docker Compose, Traefik

Networking & Security: Cloudflare (Tunnels/Zero Trust, DNS-01, R2), Tailscale (Tailnets, ACLs), OPNsense (CARP HA, firewall policies), WireGuard, Split-DNS, TLS/SSL

IaC & Automation: Terraform, Ansible, GitHub Actions (CI/CD), Bash, Python

Storage & Databases: SeaweedFS (S3-compatible), PostgreSQL, Supabase

Standards & Tooling: Diátaxis documentation framework, Git/GitHub, REST APIs

PROFESSIONAL EXPERIENCE

DevOps / Infrastructure Engineer | Zeraynce

Aug 2026 – Sep 2026 | Remote (Digos, Philippines)

- Owned deployment and supporting infrastructure for a TypeScript/Next.js product across separate staging and production environments.
- Implemented **Cloudflare Tunnels (cloudflared)** for public web ingress, eliminating direct host origin port exposure and preventing public IP discovery.
- Enforced zero-trust operational access by integrating **Tailscale mesh networking**, restricting developer and CI/CD SSH access via role-based Tailnet ACLs.
- Built a multi-stage **GitHub Actions CI/CD pipeline** publishing immutable container tags to GHCR, with automated deployment execution over Tailscale and SSH.
- Automated host provisioning and server baseline hardening using **Terraform** (DigitalOcean droplets, firewalls, reserved IPs) and **Ansible** (Docker, systemd, OS hardening).
- Authored production deployment runbooks, environment contracts, validation checklists, and rollback procedures.

Infrastructure Operations / Linux SysAdmin | Helity.org

Dec 2025 – Present | Remote (Germany)

- Design, operate, and harden private Proxmox VE infrastructure with dedicated network segmentation across management, workload, and synchronization domains.
- Implemented **split-DNS resolution** and automated TLS certificate issuance for private internal endpoints using **Cloudflare DNS-01 ACME** challenges.
- Engineered a Python/FastAPI provisioning service integrating Budibase, PostgreSQL, and the Proxmox API to automate tenant lifecycle and infrastructure provisioning.
- Contributed to high-availability network design using **OPNsense CARP** with XMLRPC configuration synchronization and pfsync state tracking.
- Standardized operational documentation, runbooks, and disaster recovery procedures using the **Diátaxis framework**.

DevOps Intern | MiniClean Business Solutions (Infosoft)

Mar 2026 – Jun 2026 | On-site (Davao City, Philippines)

- Optimized Docker-based PHP/Laravel local development stacks, standardizing dependencies and reducing setup friction across the engineering team.
- Developed the **Web Security Chaos Toolkit**, a Python-based DevSecOps CLI orchestrating containerized security scanners (OWASP ZAP, Nuclei, Nmap, Trivy) with structured reporting.
- Introduced infrastructure as code and GitHub Actions CI/CD validation gates to ensure consistent configuration and prevent configuration drift.

SELECTED PROJECTS

MaxiDOM – Behavioral Biometric Detection System | Capstone Project (Academic Security)

github.com/Sureinity/maxidom

- Tech Stack:** Python (FastAPI), Scikit-learn (Isolation Forest), Pandas, NumPy, Chrome Extension (MV3)
- Researched and engineered an academic cybersecurity capstone utilizing subconscious keystroke and mouse behavioral dynamics to continuously authenticate browser sessions and detect impersonation attacks in real time.

EDUCATION

Bachelor of Science in Information Technology | University of Mindanao – Digos College

Aug 2023 – Jul 2026

Graduated with a focus on Linux systems administration, networking, web development, cybersecurity, and practical infrastructure automation.
